Mudabbir: UI/UX Design Description (Web + Mobile)

Based on the Mudabbir use case, activity, sequence (SSD), block and ER diagrams. The SRS and template documents were not reviewed, so screen names and labels may need adjusting to match them.

1. Shared design foundation

Product feel: calm, respectful, scholarly, and focused on reading. Content comes first and there are no flashy elements.

Visual style

- **Colors:** deep emerald or teal as the primary, warm gold as the accent (used sparingly for badges and certificates), and off-white or warm cream backgrounds. Provide a full dark mode, since much Quran reading happens at night.
- **Typography:**
  - Arabic: a Uthmani-style font (e.g., Amiri Quran, KFGQPC Uthmani) at generous size and line height.
  - UI and translation text: a clean sans-serif (Inter, Poppins, or Noto Sans). Use Noto Nastaliq or Jameel Noori for Urdu translation.
- **Layout:** card-based, with rounded corners, soft shadows and lots of whitespace.
- **Language and direction:** support English and Urdu UI, with RTL layout for Arabic and Urdu. Verse and translation text sizes should be user-adjustable.
- **Accessibility:** WCAG AA contrast, scalable text, screen-reader labels, and voice search as an alternative to typing.

Role-based experience

One login screen, then a different dashboard per role (Learner, Scholar, Admin), as in the activity diagram.

Reusable components

Verse card, relevancy-score badge, AI-generated tag (with a "Scholar verified" badge when approved), course card, progress ring, quiz question card, audio player (for tafsir audio), and status chips (Pending / Approved / Rejected).

Trust cues

Because AI content touches religious material, every AI output should clearly show:

- an **"AI-generated"** label
- the **verse and tafsir source references**
- a **"Verified by Scholar"** badge, once approved

2. Web application

The web app is the full-featured version. It has three role portals and works best on desktop and tablet. It uses a left sidebar plus top bar layout, and the top bar holds global topic search with a mic icon, notifications, language toggle, and profile menu.

2.1 Public and authentication pages

- **Landing page:** hero with a tagline and a search bar ("Search the Quran by topic"). Sections cover features (Topic Search, AI Summary, Courses, Khutbah/Duroos Assistant), how it works, scholar verification, and a footer.
- **Sign up:** name, email, password, and a role request (Learner or Scholar). The scholar option asks for credentials, qualification and an optional document upload. A confirmation message says "Your account is pending admin approval."
- **Login:** email and password, a forgot-password link, and an error message for invalid credentials.
- **Pending approval screen:** shown to accounts not yet approved.

2.2 Learner portal

1. **Dashboard:** greeting, "Continue reading" card (last-read ayah), search shortcut, enrolled courses with progress rings, recent bookmarks, a suggested topic of the day, and quiz history.
2. **Read Quran:**
    - Surah and Juz list with search.
    - Reader view with Arabic text, translation below each ayah, and a Tafsir side panel or expandable section.
    - Word-by-word view: tapping a word shows its meaning, from the WORD / WORD_MEANING entities.
    - Tafsir audio player and a bookmark icon on each ayah.
    - Settings for font size, translation language, and theme.
3. **Search by Topic:**

- Large search bar with typed and voice search (mic).
- Results are a ranked list of verse cards, each with a relevancy score (percent bar), translation, and a link to full context.
- An AI Summary card sits at the top, with its sources and the verified badge if applicable.
- Filters: surah, relevancy, translation language.
- Buttons to Take Quiz on This Topic and Generate Khutbah/Duroos.

4. **Topic Quiz:** one question per screen, with a progress bar, options, an optional timer, a result summary (score, correct and incorrect answers), and review with explanations. Past attempts are listed.
5. **Bookmarks:** saved ayat grouped into collections or tags, with notes and quick remove.
6. **Khutbah / Duroos Assistant:** a topic input plus optional type (Khutbah or Duroos), duration, and audience. The output is structured content (introduction, main points, closing) with verse references linked to the reader. Actions: copy, download as PDF, save, regenerate.
7. **Courses:**
   - Catalog: course cards with title, scholar, topics covered, duration, and an Enroll button.
   - Course detail: overview, syllabus (topics), and progress.
   - My Courses: in-progress and completed lessons, assessments, and topic progress checklist.
8. **Certificates:** list of earned micro-credentials, with preview, download PDF, and a verification code.
9. **Profile and settings:** personal info, language, appearance, and notifications.

2.3 Scholar portal

1. **Dashboard:** counts for pending AI reviews, active courses, and quizzes, plus recent activity.
2. **AI Content Review Queue (RAG):**
   - Table or list of pending AI items (summaries, generated content), filterable by type and status.
   - Split-screen review: AI output on the left, verified sources (ayah, tafsir, reference) on the right.
   - Actions: Approve & Publish, Reject & Send Back (with a required comment), and edit.
3. **Verify Ranked Verses and Tafsir Source:** view the ranked ayat per topic, reorder or correct relevancy, and confirm or flag the tafsir source.

4. **Topic and Subject Management:** define subjects and subtopics, link ayat to topics, and set relevance.
5. **Course and Micro-credential Management:** a create/edit wizard (details, topics schedule, assessments, publish) and a list of the scholar's courses with enrollment counts.
6. **Assessment Builder:** question bank, add questions with multiple options, marking the correct answer, assigning to a topic or course, and a preview.
7. **Results:** learner scores per assessment, with filters and export.

2.4 Admin portal

1. **Dashboard:** KPIs (total learners, scholars, pending requests, active courses, certificates issued) and charts for registrations and activity.
2. **Account Requests:** a table of pending learners and scholars with details. Approve or reject, in bulk or individually.
3. **User Management:** search and filter, then view, edit, assign role (Learner or Scholar), and activate or deactivate accounts.
4. **Enrollment Management:** manually enroll learners in courses.
5. **Certificate Management:** verify results or marks, and generate or revoke certificates.
6. **System and Activity Logs:** search logs and account actions (based on the SEARCH_LOG entity).

3. Mobile application

The mobile app is built learner-first for daily reading, quick search and learning on the go. Scholar and admin tasks are heavier, so they either appear in a lighter form or stay on the web (see 3.4).

Navigation: a bottom tab bar with 5 tabs:

Tab	Purpose
Home	Dashboard
Read	Quran reader
Search	Topic search (the central, emphasized button)
Learn	Courses, quizzes, and certificates
Profile	Bookmarks, settings, and account

3.1 Onboarding and authentication

- 3 splash or onboarding screens (read, search by topic, learn with verified scholars).
- Language selection, then Sign up or Login (with optional biometric or PIN unlock).
- Pending-approval screen.

3.2 Learner screens

- **Home:**
  - Greeting.
  - Continue Reading card.
  - A prominent search bar with a mic.
  - A horizontal scroll of enrolled courses with progress.
  - Quick actions: Bookmarks, Take a Quiz, Khutbah Assistant.
  - Topic of the day.
- **Read:**
  - Surah and Juz list with search.
  - Reader with swipe to the next ayah or surah, and a tap on an ayah that opens a bottom sheet with translation, tafsir, word meanings, audio, bookmark, share, and copy.
  - Floating audio mini-player.
  - Reading settings sheet (font, translation, theme).
  - Offline reading of downloaded surahs is a recommended addition.
- **Search:**
  - Full-screen search with a large mic button, recent searches, and suggested topics.
  - Results as a vertical card list with relevancy badges.
  - An AI Summary card at the top, which can be collapsed.
  - Filter chips under the search bar.
  - A sticky action bar at the bottom with Quiz and Khutbah.
- **Quiz:** a focused one-question-per-screen flow with a progress indicator, then a result screen with a score ring and answer review.
- **Khutbah / Duroos Assistant:** a simple form (topic, type, duration), then generated content in collapsible sections with tappable verse references (opening a bottom sheet), plus share, export, and save.
- **Learn tab:** segmented control with Explore, My Courses, Certificates. Course detail has a syllabus and a sticky Enroll button. Certificates open with a preview and a download and share action.

- **Profile:** bookmarks (collections), reading history, language, theme, notification settings, and logout.

3.3 Mobile-specific touches

- Push notifications for approval status, new courses, quiz reminders, and reading streaks.
- Home-screen widget or "verse of the day".
- Thumb-friendly layout, with primary actions in the bottom half of the screen.
- Pull-to-refresh and skeleton loaders.

3.4 Scholar and admin on mobile (recommended scope)

- **Scholar:** a lightweight "Review" tab for the AI review queue, with approve or reject and a comment, plus notifications for new items. Course and assessment creation stays on the web.
- **Admin:** account approvals and activate or deactivate. All heavier management stays on the web.

4. Web vs mobile at a glance

Feature	Web	Mobile
Quran reading	Side-by-side tafsir panel	Bottom sheet
Topic and voice search	Yes	Yes (voice emphasized)
AI summary, quiz, bookmarks	Yes	Yes
Khutbah/Duroos assistant	Yes (PDF export)	Yes (share)
Courses and certificates	Yes	Yes
Scholar review queue (RAG)	Full split-screen	Light approve/reject
Course and assessment builder	Yes	Web only
Admin management	Full	Approvals only

5. Suggested next steps for the design work

1. Build a user flow for each role from the activity diagram.

2. Create low-fidelity wireframes for the key screens: Login, Dashboard, Reader, Search Results, Quiz, Review Queue, and Admin Requests.
3. Define the style guide (colors, fonts, components) in Figma.
4. Build high-fidelity mockups and a clickable prototype.
